

SPECIAL COLOUR PAINT

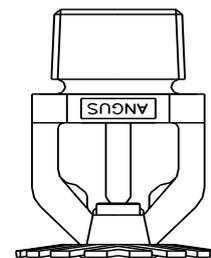

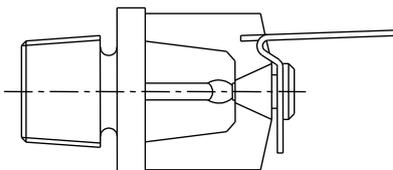

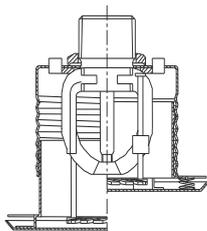

FINISHES FOR SPINKLERS AND ACCESSORIES

GW SPRINKLER A/S

All GW "S" range sprinkler heads are available in the customer's choice of colour and to their required percentage gloss finish. Because "S" range sprinklers are made in our own purpose built manufacturing facility in Denmark sprinklers and accessories in most colours can normally be manufactured in 3 working weeks from order.

All GW "S" range miniature automatic sprinklers are powder coated with a paint formulated from 50% epoxy and 50% polyester which is then oven baked on to the sprinkler body after the deflector has been fitted to provide a tough, chip resistant and long lasting finish.

White, to RAL9010 33% ($\pm 2\%$) gloss, is stocked as standard.

Approvals.

All "S" range sprinkler heads are approved by FM, VDS and LPCB are CE marked and are available in many colours and finishes.

Cost.

Special coloured sprinklers are charged at the price of White painted heads and, in addition, each batch of sprinkler heads painted to a special colour is subject to a one off paint surcharge (see current price list). Where the colour has already been used for another customer and is in stock this will be low, but if a special mix of paint is required, the surcharge will reflect the extra cost of the paint. Where the quantity of heads being painted is large, a specific price must be negotiated with GW in advance.

Accessories.

Where heads need to be installed with single or two piece rosettes these can be painted at the same time as the sprinkler heads. While the rosettes will be charged as White, no additional special colour surcharge will be made if the heads and rosettes are painted at the same time.

Non standard colours.

All colours specified in the RAL system of colour coding can be accommodated. However if the colour is not in the RAL system, or the RAL number is not known, colours can often still be matched if a sample is provided. Depending on the colour there may be an additional surcharge.

Percentage gloss.

When defining paint colours it is best to specify the percentage gloss finish. If no gloss ratio is specified 33% ($\pm 2\%$) gloss will generally be used as standard.

The right is reserved to vary or modify any specifications without prior notice.
